why data management?

Stata v other software

let's fire up stata

[*] bonus—data sources [skip, can look at home]

about myself...

- `theaok.github.io`
- and more importantly `http://scholar.google.com/citations?hl=en&user=pz9RYloAAAAJ&view_op=list_works&sortby=pubdate`
- and i mostly use: wvs, gss, brfss, and other surveys
- if you use same data then i can share my code with you!
-
- except grades and ps submission on GIT, grades in Sakai, everything at: `theaok.github.io/dirStu`

yourself? (see if others overlap: can collaborate!)

- ◇ research interests and data?
- ◇ software? eg SAS, SPSS, Stata, Python, R
- ◇ specific expectations for this class?
-
- [i'll email you some data based on your interets; bother me for more!]

weekly labs

- small class so will just flip it often, esp in 2nd part

mission statement/core values

- replication [replication.pdf]
- coding/programming; no pointing-clicking
- collaboration, sharing, open-source
- be lazy! (copy from others incl my code)
- it is a directed study, so you must have the topic and data or figure it out asap!

outline

why data management?

Stata v other software

let's fire up stata

[*] bonus—data sources [skip, can look at home]

data management is fundamental

- in order to analyze data you need to manage it first
- GIGO (Garbage In Garbage Out)
 - if data management fails, data analysis fails

preparing data vs analyzing data

- it takes more time to prepare data than to analyze it
- it may take years to prepare a dataset, and hours to analyze it
- it may be hundreds of lines of code to prepare dataset and several lines to analyze it
- start early !

it's all about productivity

- productivity = output/time \approx \$
- reuse your code, copy from others, google
- minimize time spent on coding
- do other things: eg read journal articles, books
- be strategic: do spend time on coding if this will cut more time later than you invest now doing it

a critical decision!

- it takes months to get productive with software
- it takes years to master software
- huge time investment
- in soc sci dat man the choice is: Sas, Stata, R, Python
- there's more (Lisrel, HLM, etc) but the above are major
- excel and spss are junk that no one should use

which one?

- Stata: powerful, no need to learn any other software; sufficient for vast majority of projects: data analysis, data management and graphics
- R: most powerful statistical software (and coming up!)
- Stata: user friendly, fast, very concise code
- R: user unfriendly, slow; weird code!
- Stata, R: great user community: listserv, websites, etc.
- Sas: a dinosaur (still, often industry standard), very verbose
- R: free, Stata: around \$200; sas over \$1k

which one?

which stata

stata editions	# observations	# variables
small(student version) [useless!]	1,000	99
Intercooled (standard version)	based on ram in your computer	2,047
se [for large datasets]		32,767
mp (multi-processor) [fastest]		32,767

- just use Stata-IC (Intercooled), perpetual license: \approx \$200
- <https://www.stata.com/order/new/edu/gradplans/campus-gradplan>

stata interface; and do intro.do

looking

- exploring your data is critical!
- we will learn many commands to understand data
- most basic: `d` `sum` `tab`
- remember this:
 - to manage data well, you need it to understand it well
 - it takes a lot of time to understand it well, and hence
 - either manage data you are already familiar with
 - or data that you are ready to invest a lot of time into knowing
- again, the bottomline in this class is to manage data that is of great interest to you

a really cool data

- <https://www.icpsr.umich.edu/icpsrweb/ICPSR/ssvd/>
- one great way to find data is to read literature!
 - read stuff on your topic of interest
 - and use data that people use you in your field
